Architecture
step pyramid- 1st pyramid ever built
The Ancient Egyptians used simple machines such as pulleys to build pyramids.
Simple machines
built to protect the pharaoh's body.
in Giza
The Great pyramid- largest pyramid
The Great pyramid was the tallest building on earth up until 1889
an architect is a person who designs buildings
architects are the people who would build the pyramids
Before the step pyramid was built they used mastaba instead of pyramids
built around 3000 to 2500 BC
mastaba- a square building with one room inside
Pyramids were built during the old kingdom
